# Structural Steel Detailing & Estimating

Eagle Structure provides detailed and methodical Structural Steel Detailing and Estimating services. Our strict adherence to global standards such as AISC, BS, CISC Euro codes, and Australian has not only earned us great credibility, but has also made us proud to serve numerous large and medium-sized projects. We serve a variety of industries and use the most latest version of Tekla as well as advanced steel platforms supported by cutting-edge technology.

Our detailing team works with Tekla Structures, the most modern 3D structural steel detailing programme. We may use this tool to pre-build the steel frame in a virtual 3D environment. This provides us with a comprehensive 360-degree perspective of complex framing linkages and enables us to predict future conflicts.

We have a team of well-trained detailers who work under the supervision of our vastly experienced project managers and a team of quality analysts. They have a track record of delivering services with pinpoint accuracy and on time. They reduce the cost and time of production by being able to identify snags early on.

# Sectors We Serve!

01
